EDUCATION

Purdue University

West Lafayette, IN

Bachelor of Science in Computer Science, Minor in Mathematics; GPA: 3.77

December 2026

- **Coursework:** Data Structures, Object-Oriented Programming, Computer Architecture, Systems Programming

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, HTML/CSS, C, R, SQL, Bash, x86-64 Assembly

Frameworks and Libraries: React, Flask, Firebase, Pandas, NumPy, Scikit-Learn, OpenCV, Tensorflow, JUnit, Pytest

Other: Git, GitHub, GitLab, JupyterLab, Jira, HTTP, REST APIs, SDLC, Linux/Unix, Windows, Docker, Kubernetes

EXPERIENCE

Software Engineer Intern

May 2024 – Aug 2024

John Deere

Moline, IL

- Led efforts to migrate 7+ Kubernetes namespaces from the deprecated datacenter dev/prod clusters to the new ones, updating DNS records, ingress controllers, storage classes and Secrets to ensure exceptional user experience
- Designed and built a fully automated self-healing pipeline leveraging a LangGraph-based agent for troubleshooting anomalies with Extreme Networks devices, improving mean time to resolution (MTTR) by up to 96.67%
- Shipped a production-grade hybrid prevention layer (Redis + ServiceNow checks with 7-day cooling) blocking duplicate incident and redundant anomaly processing, and reducing noise in the system

Data Science and Backend Intern

Jun 2024 – Aug 2024

Space Cow LLC

Remote

- Authored a JavaScript session storage-based conversation history and token tracking system feature, reducing overhead by enabling history truncation for models with context windows ranging from 4,000 to 2M tokens
- Designed an abstraction layer using Python allowing developers to integrate 120+ LLMs from over 5 proprietary and open-source providers, streamlining the integration process for new models
- Created a CLI-based RAG chatbot using LangChain and GPT-3.5, supporting analysis of PDF, DOCX, TXT files and websites across 8+ unique domains, enhancing the speed of document insight retrieval

Data and Software Engineering Researcher

Aug 2023 – May 2024

The Knudsen Institute

West Lafayette, IN

- Conducted in-depth analysis in partnership with the Knudsen Institute and 5 team members to evaluate manufacturing capacities for transitioning from ICE to EV production
- Crafted HTTP web scraping scripts using Python to extract detailed manufacturing processes, capabilities, and materials data from 8 small and medium-sized automotive part manufacturers' websites
- Achieved an average training loss of 0.006% by fine-tuning state-of-the-art NER models like DistilBERT to identify and categorize capabilities related to CNC machining and aluminum die casting in the scraped data

SRI Web Development Intern

Aug 2022 – May 2023

Pacific Northwest National Laboratory

Remote

- Spearheaded the creation of a "News" page using React and Emotion CSS, integrated with the production dashboard; increased organizational visibility by showcasing the application's achievements to 6+ stakeholders
- Implemented routing workflow enhancements with JavaScript, robust validation for district modeling processes, and resolved 20+ functional defects to ensure greater flexibility and optimal performance
- Formulated an algorithm to combine the physical properties and geospatial vector-based geometries of 2 district-level components using TypeScript, resulting in improved user experience and data validation effectiveness

PROJECTS

SFSL Delivery | *MongoDB, Express.js, React, Node.js, Twilio, Git, GitHub*

Nov 2024 - May 2025

- Developed a Twilio-based SMS ordering pipeline for SFSL (serving 4,900+ individuals), with live inventory integration, stateful add/modify/delete flows, whitelist-only access, and concurrent-safe processing

Quizz.It | *Python, Flask, React, JavaScript, Firebase, Gemini API, OpenCV, LangChain, Git*

Jan 2024 - Aug 2024

- Led a 4-person team to build an educational productivity app powered by an OCR-driven, 8-endpoint Flask REST API, supporting efficient file upload/retrieval, summaries, automated test/quiz generation and integrated chatbot Q&A for documents up to 75 pages
